

THE ORGANIC REVOLUTION

/HOW IT WORKS

ABOUT THE COMPOST SERVICE

The Organic Revolution is a program set up to assist businesses in increasing their sustainability through waste diversion from landfill, reaching a 70-90% recycling rate just by separating organics and recyclables from general waste.

On average 70% of general refuse in a hospitality venue is organic waste (not including recyclables) - this encompasses all food scraps, paper products (such as napkins and paper straws), and compostable packaging.

HOW IT WORKS:

ORGANIC WASTE

COMPOST BIN

COLLECTION

COMPOST

Divert your organic waste from landfill.

Separate your organic waste to put in the compost bin.

Your organic waste will be collected on a regular schedule.

And recycled into a new resource!

By diverting organic waste from landfill we support a circular economy and reduce our carbon footprint as just 1kg of organic waste decomposing in landfill produces 1.90kg of CO₂e!

The average cafe will produce around 150kg of organic waste per week - sending that waste to landfill is the equivalent of running 2.5x 50L petrol tanks to empty!
